

Sunnovative — Digital Company Profile (E-Brochure) — Implementation Plan

1. Concept

Ek **mobile-first, 2-section single-page website** (link ya QR se share hoga on-site with customers). Ye ERP/portal se alag, standalone chhota static site hai — koi login/backend nahi chahiye.

Format: Ek hi URL par 2 “pages” — top navbar me Page 1 / Page 2 tabs (ya smooth scroll sections). Mobile pe customer ke saamne kholke dikhane layak — bada text, kam clutter, fast load.

Use case: Sales rep customer ke paas jaake link kholta hai (ya QR scan karwata hai) → company introduction, products, journey, brand trust, photos/video — sab 30 second me dikh jaye.

2. Tech stack recommendation

Kyunki ye standalone hai aur Gemini se generate karwana hai, **plain HTML + CSS + vanilla JS** best hai (koi build step nahi, seedha open ho jaye, free host ho jaye):

- Single index.html + style.css + script.js (ya sab ek hi HTML file me — Gemini ke liye asaan)
- Hosting: **Vercel / Netlify / GitHub Pages** — free, seconds me deploy, custom short link mil jayega
- Optional: QR code generator (qrcode.js) taaki visiting card pe QR print ho sake

Agar future me isko ERP se connect karna ho (dynamic products/logos update karne ke liye), tab React/Next.js le sakte ho — abhi ke liye static kaafi hai, jaldi bhi banega.

3. Content structure

PAGE 1

Section	Content
Header / Profile	Company logo, contact photo, mobile number, email — top pe sticky ya hero banner me
Our Products	Two cards: Solarkits — B2B supply for govt tenders & discom schemes; BOSkit — branded BOS kit manufacturing / OEM supply
Company Journey	Horizontal or vertical timeline: 2017 Founded → 2020 Pvt Ltd → 2025 Solarkits supply started → 2026 Govt & Discom supply started

PAGE 2

Section	Content
Our Solar Brand Partners	Logo grid: Redren, Sunify, Solaryaan, Polycab
Photos	BOS kit product photo(s) — gallery/grid
Videos	Factory internal video — embedded player
Contact / CTA	Website link (sunnovative.com), phone, "Get in touch" button (tel:/WhatsApp link)

4. Design direction

- **Colors:** Solar-energy palette — deep blue/navy + solar orange/yellow accent, white background (matches typical EPC/solar brand feel)
 - **Typography:** Clean sans-serif (Inter/Poppins), big headings — readable on phone screens held at arm's length
 - **Timeline:** Use simple dots-and-line vertical timeline for journey — easy to scan
 - **Product cards:** Icon + short 1-liner, not paragraphs — customer scans fast
 - **Brand logos:** White/light card background, evenly spaced grid, consistent sizing
 - **Navigation:** Simple Page 1 | Page 2 toggle at top, sticky, thumb-reachable
-

5. Assets needed before building

- ☐ Company logo (high-res)
 - ☐ Profile photo + mobile + email for header
 - ☐ BOS kit product photo(s)
 - ☐ Factory internal video (short, compressed for web — under 20MB ideally, or host on YouTube unlisted and embed)
 - ☐ Brand partner logos: Redren, Sunify, Solaryaan, Polycab (PNG, transparent bg preferred)
-

6. Ready-to-use Gemini prompt

Copy-paste this into Gemini (attach the assets above where it asks for images):

Create a single-page, mobile-first responsive website in plain HTML/CSS/JS (one file, no frameworks) for a solar EPC company called "Sunnovative". It has 2 sections toggled by a sticky top tab bar: "Page 1" and "Page 2".

PAGE 1:

1. Header: company logo, profile photo, mobile number, email (contact card style)
2. "Our Products" — 2 cards:
 - Solarkits: B2B supply for govt tenders and discom schemes
 - BOSkit: manufacturing branded BOS kit / OEM supplier
3. "Company Journey" — vertical timeline:
 - 2017 Founded, 2020 Pvt Ltd, 2025 Solarkits supply started,
 - 2026 Govt & Discom supply started

PAGE 2:

1. "Our Solar Brand Partners" — logo grid: Redren, Sunify, Solaryaan, Polycab
2. "Photos" — gallery of BOS kit product photos
3. "Videos" — embedded factory internal video
4. Footer: website link (https://sunnovative.com/), phone number, a WhatsApp/Call CTA button

Design: solar-energy color palette (navy blue + orange/yellow accent), clean sans-serif font, big tap-friendly sections, fast-loading, works great when opened on a phone in front of a customer.

7. Next steps

1. Collect the assets (Section 5)
2. Run the Gemini prompt (Section 6), tweak content as needed
3. Deploy to Vercel/Netlify → get short shareable link
4. Optional: generate QR code pointing to the link, print on visiting cards
